# Careers in Economics

## Economics graduates and the employment market

**What do Economists do?** Some familiar roles are the economists who attempt to monitor and explain 'big picture' events in the national and global economies. Both public and private sectors value that expertise, and ongoing economic challenges have led to particular demands for graduates literate in economics. In addition, economics graduates work in other areas, right across the spectrum, including for example for health care providers and policy makers, in energy and environmental industries, and in the education and labour market policy domains. Most generally, employers value the economics graduate's analytical abilities, and their capacity to manage and interpret data. Graduating in Economics can lead to working for a variety of employers, including governments, private companies and non-governmental organisations (NGOs). All economics graduates do not go on to work as economists, however, the skills you develop (some listed below) are highly sought after by most employers.

- Ability to think critically and analytically
- Oral and written communication skills
- Time / task management skills
- Numerical and computing skills
- Problem solving / decision making skills
- Produce logical arguments supported by evidence

- Research skills
- Business / political awareness
- IT, information retrieval and presentation skills
- Research skills and Teamwork skills

# What our students say...

**Tom McDonnell,**  
BA Economics, Legal Science

**What subjects was your degree in?**

Economics, Legal Science

**Do you have any postgraduate qualification?**

MA (Applied Economics), PhD

**What is your current role?**

Policy analyst with TASC, which is 'think-tank' in Dublin, providing analysis and advice across a wide range of policy issues, many of which directly concern the evolving economic situation in Ireland.

**How did studying Arts benefit your career?**

From the outset, the Arts experience encourages you to appreciate a range of diverse subjects, and to explore them in depth, and critically. Apart from a core knowledge of economics and other disciplines, this willingness to challenge received wisdom and 'look behind' the surface is vital in doing policy work in the 'real world.'
